# EARLY CHILDHOOD SYSTEMS LEARNING COMMUNITY

Join us for the Early Childhood Systems Learning Community! All individuals working in any child/youth system who are interested in learning more about early childhood systems are welcome. This virtual community is designed for individuals to connect nationally with peers and collaborate across systems while focusing on opportunities and challenges in early childhood. Participants will come together virtually through monthly learning events and regularly as needed to connect, ask questions and learn from peers and national leaders in the field.

The Early Childhood Systems Learning Community will utilize a system of care lens and an implementation science framework in guiding participants through the components in designing and supporting an early childhood system.

Examples of content discussed in this learning community includes:

▶ Enhancing system partnerships ▶ Improving policies ▶ Expanding the services array
▶ Improving financing mechanisms ▶ Implementing workforce development strategies

## All are welcome in the Early Childhood Systems Learning Community!
